

# Weekly Progress Report

Group 22 - SafeX Educational Learning Platform - Week 3 - Muhammad Abdullah

## 1. Module

Video Management (Search, Review, Publish, Edit, Delete) for the SafeX admin panel. Built as a standalone React + ASP.NET Core Web API + SQL Server project.

## 2. Objectives for the week

- Integrate YouTube Data API v3 for search with thumbnail, title, channel, duration, views, description, and a preview player.
- Deliver the full admin flow: Search to Review to Publish to Edit to Soft Delete to Restore to Permanent Delete.
- Design the SQL Server schema (Categories, Videos) and expose it through EF Core.
- Ship a dark and light editorial UI with glass surfaces, responsive layout, and role-gated placeholders for teammates' modules.

## 3. Progress vs Plan

| Task                         | Planned  | Status |
|------------------------------|----------|--------|
| YouTube Data API integration | Days 1-2 | Done   |
| SQL Server schema + EF Core  | Day 2    | Done   |
| Search + Review screens      | Day 3    | Done   |
| Publish + Edit + Delete flow | Days 4-5 | Done   |
| UI polish + dark/light theme | Day 6    | Done   |
| Docs, demo prep, screenshots | Day 7    | Done   |

## 4. Deliverables completed

- Working end-to-end demo of Search, Review, Publish, Edit, Soft Delete, Restore, Permanent Delete.
- Source code for the Video Management module (Controllers, Services, Repositories, DTOs, EF Core context).
- SQL scripts to create the database and seed categories.
- Notes on YouTube API integration and quota handling (see 03\_Research\_and\_YouTube\_API\_Notes.pdf).
- Presentation slides (see 06\_Presentation\_Slides.pptx).

## 5. Coordination with Group 22

Shared the schema, route paths, and status enum with Sairam Abdullah so no teammate duplicates the Videos or Categories tables. Placeholder pages exist for Auth, Dashboard, Categories,

Recommendations, and Kids Panel so their modules plug into the same shell.

## 6. Blockers

SSMS certificate trust error on first connect (resolved by enabling Trust Server Certificate). YouTube API quota is 10,000 units per day; single-search cost is 101 units, so debouncing was added.
