

Daily Work Log

SafeX Video Management Module. Student: Group 22 member. Week 3.

Date	Focus	What I did
Wed, 22 Jul 2026	Kickoff and setup	Read the assignment brief. Installed Node.js, SQL Server Express, SSMS, and .NET 8 SDK. Created the SafeX database and ran the create + seed scripts in SSMS. Verified Categories table has 7 rows.
Thu, 23 Jul 2026	Backend API	Built the ASP.NET Core Web API with EF Core. Wrote the Video and Category models, DbContext, and repository. Implemented the YouTubeService that calls YouTube Data API v3 (search.list + videos.list) with the API key kept server side.
Fri, 24 Jul 2026	Frontend and integration	Built the React + Vite frontend: sidebar, topbar, dashboard, search, library, review, publish, edit, and trash pages. Wired the api.ts client to the backend on localhost:5001. Added dark and light theme toggle and glass surfaces.
Sat, 25 Jul 2026	Polish, testing, and submission	Full end to end test: searched YouTube, sent a video to review, approved it, published to Kids category, edited the title, soft deleted, restored, and hard deleted. Recorded the demo video. Wrote the report, packaged the zip, and pushed to GitHub.
